### Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 USC § 102*

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1, 2, and 5 are rejected under 35 U.S.C. 102(b) as being anticipated by Delvael US patent 6,009,699.

'699 discloses a composite string for a tennis racket. The strings of a tennis racket are widely known to be woven in an open orthogonal (warp and weft) mesh (mat) to form the hitting surface of the racket.

The composite string includes an outer skin or envelope 5 corresponding to the claimed "hollow member" and twisted outer and central 4,3, monofilaments corresponding to the claimed "inter-twisted plurality of monofilaments". '699 discloses the number of monofilaments lie in the range of 3-6.

The monofilaments are composed of polyamide, a widely known plastic polymer. The example in figure 1., clearly shows monofilaments 4 having a circular cross section.

***Claim Rejections - 35 USC § 103***

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 3 and 4 are rejected under 35 U.S.C. 103(a) as being unpatentable over '699 in view of Nelson US patent 4,870,813.

Although '699 teaches all of the limitations of the claims listed above, '699 does not teach the use of different color yarns within the thread to produce visual color effects.

However, the use of various colors in yarns or threads to provide some predetermined visual effect is a widely known and practiced technique. As evidence, '813 teaches a plied carpet yarn. '813 states, "The visual effect may be heightened by providing component yarns of contrasting color, shade or dyeability. (col. 2, line 20-25)"

Therefore it would have been obvious to one of ordinary skill in the art at the time of invention to provide a plied thread, utilizing different colored component yarns to provide some visual effect to the yarn.
